ENABLED

Take control of your lighting

Using EnabLED gives you full control of your lighting solutions, and we don't just mean turning them on and off. EnabLED technology means you also have complete visibility of your electricity usage, so you know what you're using and therefore spending.

The technology also automates all emergency functions and duration while also monitoring air quality control via built-in sensors. These both negate human error and improve and promote overall workplace Health and Safety.

Why choose EnabLED?

The beauty of EnabLED is that it is designed to be used whenever you need it. The objective is to help with cost-saving; clients have noted savings of up to 90% on their energy costs after installing EnabLED.

Who can EnabLED help?

Predominantly, it's the Facilities, Sustainabilities and Operations Managers we work with, the people making decisions on maintaining commercial and industrial working environments.

Use it in multiple workplaces

EnabLED can be used with other Led By Vision products inside and outside commercial and industrial workplaces. Whilst our solutions are generally installed in these environments; they are not limited to them.

Make it work for you

You can view historical data, such as emergency test reports and usage over time, using the handheld tablet. This data can be instrumental during budgeting processes, so having access to it is imperative.

Elevate your experience.

We are proud to have developed a piece of in-house technology. We did this to add yet another layer to our customer experience and satisfaction. Benefits of using EnabLED technology include:

- ✔ We take care of any repairs.
- ✔ Local controls means no high, ongoing costs.
- ✔ Limited to no chance of data and security breaches as you might get with cloud-based software.

Plug and Play: Let's go

We use a prefabricated Plug and Play solution. We simply install it as we would a standard light fitting, and the data is pulled into the hand-held tablet for commissioning before working with the customer to set up their controls. The device will control the appropriate lighting solutions throughout your workspaces as we can tailor multiple sections of your building accordingly.
